T 9001 – 5º Semestre Letivo

Github: <https://github.com/VascoMay/MissaoPraticaMundo5-N4>

Para esta missão foi solicitada a criação de uma ferramenta capaz de analisar as mensagens de rede social utilizando machine learning e processamento de linguagem natural para definir a percepção das pessoas em relação aos clubes de futebol da Inglaterra.

Foi iniciado instalando e atualizando as bibliotecas necessárias:

```
Análise de Sentimentos.

Passo 1: Instalando as bibliotecas e recarregando o ambiente

!pip install -U pip setuptools wheel

!pip install -U spacy

!python -m spacy download en_core_web_sm

!pip install spacytextblob

import pkg_resources,imp

imp.reload(pkg_resources)

WARNING: Ignoring invalid distribution -hinc (/usr/local/lib/python3.10/dist-packages)
Requirement already satisfied: pip in /usr/local/lib/python3.10/dist-packages (24.3.1)
Requirement already satisfied: setuptools in /usr/local/lib/python3.10/dist-packages (75.3.0)
Requirement already satisfied: wheel in /usr/local/lib/python3.10/dist-packages (0.44.0)
WARNING: Ignoring invalid distribution -hinc (/usr/local/lib/python3.10/dist-packages)
```

Em seguida foi importado a biblioteca Spacy responsável por análise de sentimentos e a extensão SpacyTextBlob, ferramenta para processar textos em linguagem natural.

```
Passo 2: Importando as bibliotecas para análise de sentimento

import spacy

from spacytextblob.spacytextblob import SpacyTextBlob
```

Carregando o modelo pré-treinado do Spacy e definindo o modelo para atuar no idioma Inglês(en):

```
Passo 3: Definindo o modelo e a pipeline a serem utilizadas na análise

nlp = spacy.load('en_core_web_sm')

nlp.add_pipe('spacytextblob')

<spacytextblob.spacytextblob.SpacyTextBlob at 0x7ba111536e30>
```

Após definimos a frase que será analisada: *'This is a wonderful campsite. I loved the serenity and the birds chirping in the morning.'*

Passo 4: Definindo o texto inicial a ser analisado para verificação/validação da biblioteca

Neste comando o código solicita a análise do sentimento e segue com o resultado:
'score': 0.85

Passo 5: Exibindo o resultado da primeira análise (um range entre -1 [avaliação negativa] e 1 [avaliação positiva])

```
input_polarity = doc._.polarity

sentiment = {

    'score': input_polarity

}

print(sentiment)
```

Nos passos seguintes são definidas todas as frases que precisam ser analisadas e o resultado na análise individual:

Passo 6: Definindo a lista de tweets a serem analisadas

```

for item in tweets:

    doc = nlp(item)

    input_polarity = doc._.polarity

    sentiment = {

        'tweet': item,

        'score': input_polarity

    }

print(sentiment)

```

```
